Leah Rosen ID 322867110

Eden Cohen ID 207696246

Date: 02/04/2026

1) General Overview

The application is a web-based social networking platform designed for dog owners to facilitate playdates, walks, and group meetups. *Sniffer*, the name of the application, allows users to create detailed profiles for their dogs and find compatible matches based on behavioral traits, preferences, and geographical location.

The system uses user-provided data to generate personalized matches, helping improve the social well-being of both the dogs and their owners. In addition, it includes features such as a shared availability calendar for scheduling, as well as community tools like content sharing and reviews of dog parks.

2) UX Requirements

a) User Definition

Users are dog owners looking for suitable companions for their pets, including individuals who want to expand their social circle at local dog parks or those whose dogs have specific social needs. Intended users are those interested in finding compatible companions for their dogs, socializing their dogs in a safe and controlled environment, and accessing community-based information about dog-friendly places and services.

b) User Needs

1. To find compatible dogs based on personality, size, and behavior
2. To ensure safe and appropriate matches
3. To easily coordinate meeting times with other dog owners
4. To view availability of other users
5. To share and consume dog-related content (photos/videos)
6. To receive recommendations for products and activities

c) Service provided by the application

1. **Matching system (proposed names: Paw-fect Match, GoFetch)**
   A system that analyzes dog characteristics, user preferences, location, and availability to identify and rank the most compatible matches between dogs for social interactions and playdates.

2. **Availability Calendar**
   Users can define both their own and their dog's availability, enabling time-based matching by identifying overlapping schedules and supporting both planned and spontaneous meetups.

3. **Meeting Scheduling**
   Users can organize and coordinate interactions such as playdates, walks, and group meetups based on shared availability and mutual matches.

4. **Community Discovery (proposed name: Paw-pular Finds)**
   Users can share photos, videos and review dog parks, products, toys, and activities. This fosters community engagement and allows users to discover relevant places, experiences, and products for their dogs.

5. **Safety and community moderation (proposed name: I have a bone to pick with you)**
   Users can block or report other dog owners and leave reviews, ensuring a safe and trustworthy environment. This maintains the well-being of users and their dogs, fostering a positive community that aligns with *Sniffer*'s core values.

d) Process Required to Provide the Service

User Input (Client Side): The user interacts with the system through the client interface by creating and updating a dog profile, defining matching preferences, setting availability, interacting with suggested matches (e.g., like or pass), and uploading content and reviews.

Data Processing (Server Side): The server processes the received data to provide personalized services.

1. Stores all user data in a database
2. Applies a matching procedure to identify compatible dogs, filters matches based on location, preferences, and compatibility rules, and to prioritize suitable profiles.
3. Incorporates availability data to ensure overlapping time slots
4. Tracks user interactions (likes, matches) and detects mutual matches
5. Processes user-generated content and organizes it into a personalized feed
6. Generates recommendations for matches, locations, and activities

Output (Client Side Display): The processed results are returned to the client and presented to the user:

1. A set of compatible dog profiles
2. Suggested meeting times based on shared availability
3. Notifications of mutual matches and access to contact details
4. A personalized content feed (posts, media, reviews)
5. Recommendations for dog matches, dog parks, and activities

e) **Required Data (User Input)**

In order to provide the matching and social services, the system must collect the following data from the user:

Dog Profile Information

1. Name
2. Age
3. Breed
4. Size/weight
5. Gender
6. Energy level (low/medium/high)
7. Personality (e.g., friendly, aggressive, shy)
8. Compatibility with other dogs (male/female, small/large)
9. Vaccination status
10. Play style (type of play, indoor/outdoor preference)
11. About Me: A section where owners can describe their dog's personality, behavior, and any important details.
12. Photos and/or videos

User Information

1. Username
2. Password
3. Name
4. Age
5. Gender (optional disclosure; helps tailor matches based on other users' safety preferences).
6. About Me: A brief section where users can introduce themselves, helping other dog owners know who they are meeting and fostering trust before meetups. (optional disclosure)
7. Location
8. Contact details (revealed only after a match)

Preferences for Matching

1. Desired dog characteristics (size, age, personality)
2. Location
3. Preferred type of interaction: Playdate or walk.

Availability (Calendar Data)

1. Available days
2. Available time slots

User-Generated Content

1. Photos and videos
2. Reviews of dog parks

3. Recommendations of dog services and products\

3) UI Specifications

a) The application aims to leave users with a sense of:

1. Community – fostering connection and engagement among dog owners, as well as enabling reliable recommendations and interactions.
2. Safety – protecting users and their dogs through reporting tools, and moderation.
3. Innovation – smart, personalized features that improve the user experience and match quality.

b) The UI specification document is presented below.

UI Specification Document

Project: Sniffer - Dog Playdate Matching Platform

Author(s): Romi Mali, Leah Rosen, Eden Cohen

Date: 02/04/2026

1. General Overview

This website includes seven main pages:

1. Home Page (/home) – The main swipe-based interface where users browse dog profiles and perform matching actions.

2. Login Page (/login) – Allows users to log into their account.

3. Signup Page (/signup) – Allows users to create an account and complete their dog and owner profile.

4. Dog Profile Page (/profile) – Displays and allows editing of dog and owner information.

5. My Matches Page (/matches) – Allows users to view their matches and access contact details.

6. Availability Page (/availability) – Allows users to manage their availability for meetups.

7. Recommendations Page (/recommendations) – A community page for sharing and viewing dog-related recommendations.

The layout and design are intuitive, user-friendly, and minimalistic, featuring clear navigation and a clean structure that allows users to easily access key features. The interface emphasizes simplicity, organization, and smooth interactions, ensuring an efficient experience. Additionally, the design incorporates dog-related graphics and motifs, such as paw prints, playful icons, and pet-friendly visuals, to create a friendly and engaging atmosphere that aligns with the *Sniffer*'s purpose and audience.

2. Home Page (/home)

Purpose – The home page serves as the main interaction screen where users browse dog profiles and perform matching actions.

Components:

- Header:
  - Contains the site logo on the left (Sniffer).
  - Menu on the right with links to Matches, Profile, Availability, and Recommendations.

- Main Swipe Section (Centered):
  - A card displaying a dog profile preview:
    - Dog image
    - Name and age
    - Short description about the dog (free text)
    - Location (nearby area)
    - Visual indicators (icons/tags) for: size, energy level, personality
    - Short owner description (free text preview)

- Action Buttons:
  - Sniff (🐾)
  - Skip (X)
  - Behavior:
    - Clicking Sniff or Skip loads the next profile
    - Swipe right = Sniff
    - Swipe left = Skip
    - If two users sniff each other → a match is created
    - A pop-up message appears: "It's a Paw-fect Match! 🐾 "
    - The pop-up displays the owner's contact details (phone number)

- Footer:
  - Minimal footer with basic navigation

3. <u>Login Page (/login)</u>

Purpose - To allow users to log into their account.

<u>Components</u>:

- Header:
  - Consistent with the home page header.

- Login Form (Centered):
  - Fields:
    - Email Address (required)
    - Password (required)
    - Submit Button: When clicked, the form submits and performs input validation. Upon success, the user is redirected to the home page.

- Link:
  - "Don't have an account? Sign up"

4. Signup Page (/signup)

Purpose – To allow users to create an account and complete their dog and owner profile.

Components:

- Header:
  - Same as the home page header.

- Signup Form (Centered):
  - User Information:
    - Username (required)
    - Email Address (required)
    - Password (required)
    - Location (required)
    - Owner description (free text – shown to other users)
    - Phone number (stored and revealed only after match)

  - Dog Profile Information:
    - Name (required)
    - Age (required)
    - Breed
    - Size/weight
    - Gender
    - Energy level (low/medium/high)
    - Personality
    - Compatibility with other dogs
    - Vaccination status
    - Play style
    - Dog description (free text – preview shown in cards)
    - Photos/videos upload

  - Preferences for Matching:
    - Desired dog characteristics (size, age, personality)
    - Preferred location
    - Preferred type of interaction (playdate/walk)

- Submit Button: When clicked, performs input validation and redirects the user to the home page.

5. <u>Dog Profile Page (/profile)</u>

Purpose – To display and allow editing of dog and owner information.

<u>Components</u>:

- Header:
  - Same as the home page header.

- Profile Content:
  - Image gallery (photos/videos)
  - Dog details (name, age, breed, size, energy level, personality)
  - Dog description (free text)
  - Compatibility and play style
  - Vaccination status

- Owner Section:
  - Username
  - Location
  - Owner description (free text)

- Edit Mode:
  - An "Edit Profile" button allows users to update all fields
  - Fields become editable in a form layout
  - Save button updates the profile

- Contact Details:
  - Phone number is visible only after a match

6. <u>My Matches Page (/matches)</u>

Purpose – To allow users to view their matches and access contact details.

<u>Components</u>:

- Header:
  - Same as the home page header

- Matches List:
  - Each match includes:
    - Dog image
    - Name
    - Match indication

- Behavior:
  - Clicking a match opens the full profile
  - Displays contact details (phone number)

7. <u>Availability Page (/availability)</u>

Purpose – To allow users to manage and update their availability for meetups.

<u>Components</u>:

- Header:
  - Same as the home page header.

- Availability Scheduler:
  - Weekly view or list view

- Input Fields:
  - Available days
  - Available time slots

- Actions:
  - Add availability
  - Edit existing time slots
  - Remove availability

- Save Button:
  - Updates availability data

8. <u>Recommendations Page (/recommendations)</u>

Purpose – To allow users to explore and share recommendations related to dogs.

Components:

- Header:
  - Same as the home page header.

- Content Feed:
  - User-generated posts including:
    - Dog parks
    - Dog services
    - Dog products

  - Each post includes:
    - Title
    - Category

        - Description
        - Image (optional)

- Add Recommendation Form:
    - Fields:
        - Title
        - Category (park/service/product)
        - Description
        - Image upload
- Submit Button: Adds a new recommendation to the feed

9. UI Behavior Specifications

- Input Validation:
    - All forms must validate the required fields before submission.
    - For example, email fields should check for valid email formats, password fields should check for minimum length and matching confirmation.

- Error Messages:
    - For any incorrect or missing information in the forms, an error message will be displayed near the problematic field.

- Responsive Design:
    - The layout will adjust to different screen sizes, ensuring that all components are usable and well-displayed on both desktop and mobile devices.

- Animations and Interactions:
    - Hover effects for buttons and menu items.
    - Smooth scroll for navigation links that jump to different sections on the same page.

10. Visual Design Notes

- Color Scheme:
    - Primary color: #B170E8
    - Accent color: #A315CD
    - Secondary accent: #AA512F
    - Background: #F9F3CF
- Typography:
    - Font family: Quicksand, sans-serif
    - Font sizes: 16px for body text, 24px for section titles, 36px for main headlines
